**Palm Trees**

Palm trees are considered garden plants with many varieties (species) that can reach more than 40 m in height. In this group of plants, we can find the largest leaves, inflorescences and fruits. Palm trees are of great economic importance, immediately following tomatoes, as far as their production is concerned. The palm tree collection is considered one of the largest in Europe in the open air, including different species.

**Amphitheatre**

The Amphitheatre was inaugurated in 2018. It provides an ideal space for contemplation and relaxation to the heart of the Garden. It is also used for scientific, artistic and cultural activities, particularly in summer.

**Astronomical Observatory**

The Astronomical Observatory was inaugurated in 1977 to support teaching at the Lisbon Polytechnic School. Reconstructed in 1986, it comprises three buildings: the main building, where the light is located; the observation room, where the mount is installed; and a classroom. A small wooden structure is located outside the buildings, which serves as a support instrument and as a control pavilion in the case of observing the starry night sky.
